EXAMINER'S AMENDMENT

Page 2

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE SPECIFICATION:

The last paragraph on page 2 has been amended as follows:

[The object is achieved by the combination of features described in claim 1.] The essence of the invention involves achieving a leading-edge angle of the turbine blade or vane which has been altered in order to optimize the turbine by changing the machining of the casting while retaining the same casting mold. This solution takes account of the discovery that, after development of the blade or vane has been concluded, changes should generally either be avoided altogether or carried out as early as possible, but at the same time the later changes of this type take place in the production sequence, the more successful they are. Any changes during the machining step only affect the machining tools. This significantly reduces the time delay compared to a change performed during casting. The leading-edge angle of the turbine blade or vane is altered by the casting being rotated through a correction angle about the blade or vane longitudinal axis in order to be machined.
